

Secure, Auditable Enterprise File Sharing and Management

As an IT professional, are you concerned that sensitive and confidential data may be sitting in a cloud-based sharing service?

Are employees putting your enterprise at risk with ad hoc file sharing outside of IT control?

Do you lack visibility or auditing into where or to whom file are being shared?

Do you need more control and management over mobile file sharing?

If you answered yes to any of the questions above, then read on about Rocket R/Link.

reduce risk of cloud-based file sharing with a secure enterprise file sharing and management.

Why trust your company's most sensitive and confidential information to a cloud-base file sharing site where it could be compromised? Rocket® R/Link is an enterprise file sharing and management system designed to be a secure and compliant alternative to cloud-based file sharing services.

Many organizations are under regulatory pressure to secure data when it is stored and transferred, as well as knowing who accessed certain files and who authorized that access. R/Link is hosted on *your* network, seamlessly integrating with *your* secure access and authorization systems and policies. Rocket Software's R/Link provides everything necessary for secure, compliant, and manageable enterprise file sharing.

R/Link implements a user-oriented file sharing system supporting both internal and external users, allowing authorized users to invite anyone (within or outside your company) to share folders and files. You can create folders, upload files, and control who has access and what they are authorized to do. All security and file transfer activity is logged and accessible to the R/Link system administrator.

no client software needed.

You access R/Link via any browser, so there is no additional software that needs to be installed on your devices. The R/Link user interface, also called the R/Link WebApp, is simple, intuitive, and powerful requiring very little effort for anyone to become productive. Whether accessing from a computer, laptop, tablet, or smart phone, all of the features are easily accessible. Our software is built using the latest Web application development tools and methods ensuring compatibility with all modern browsers. View, share, and manage files from any device, anytime, anywhere.
